

Declaration of Compostability

Version No.01

Issue date 26.3.2019

Product: Sulapac Universal Injection Molding

We hereby certify that the Sulapac Universal Injection Molding material comply with the certification criteria of the following standards:

- EN 13432 Packaging – Requirements for packaging recoverable through composting and biodegradation – Test scheme and evaluation criteria for the final acceptance of packaging, and
- ISO 17088 Specifications for compostable plastics

Biodegradation and disintegration of Sulapac Universal Injection Molding material follows the criteria of the above mentioned regulation. The only limitation is the biodegradation speed that depends on the thickness of the item produced from the material. Further studying is ongoing on the thickness. However, the material meets all the other requirements and doesn't contain any harmful substances. The material biodegrades releasing carbon dioxide and water.
